January 1989

The data compilation and documentation necessary for the Audiometric Test (Air, Bone, Speech Reception) Data Tape were done by Michael Rowland, Jean Roberts, Everette Collins, Dorothy Blodgett, Evelyn S. Stanton and Mary Dudley of the Division of Health Examination Statistics, National Center for Health Statistics. A special note of gratitude is due Darian Varga who patiently typed and retyped this material.

AUDIOMETRIC TEST
(AIR, BONE, SPEECH RECEPTION)

Health and Nutrition Examination Survey, HANES I, 1971-1975

Description of Survey: A detailed description of the design, content and operation of HANES I is provided in the following reports: Plan and Operation of the Health and Nutrition Examination Survey, DHEW Pub. No. (HSM) 73-1310, Series 1, Nos. 10a and 10b, Public Health Service, Washington, D.C., U.S. Government Printing Office, February 1973. Also provided is a report, Series 1, No. 14, on the augmentation survey of adults describing the relevant field work conducted between July 1974 and October 1975.

Target Population: HANES I was conducted on a nationwide probability sample of approximately 32,000 persons, ages 1-74 years, from the civilian, noninstitutionalized population of the coterminous United States, excepting those persons residing on Indian reservations. The survey started in April 1971 and for many survey components was completed in June 1974. The HANES I sample was selected so that certain population groups thought to be at high risk of malnutrition (persons with low incomes, preschool children, women of childbearing age and the elderly) were oversampled at known rates. Adjusted sampling weights were then computed within 60 age, sex and race categories in order to inflate the sample in such a manner as to closely reflect the noninstitutionalized population, ages 1-74 years, of the United States at the mid-point of the survey.

Although the main emphasis of HANES I was on nutrition, a subset of those sample persons aged 25-74 received a more detailed health examination which was continued through October 1975. No particular oversampling of subgroups of the population was done in this subsample (e.g., women of childbearing age were not oversampled as they were for the major nutrition component of HANES I). This subsample is also representative of the United States population aged 25-74 during the time of HANES I.

After the nutrition survey was completed, the detailed examination given to the 25-74 age group was continued until the total number of examined persons was approximately double the number of examinees who received the detailed examination during the nutrition survey.

Findings for the detailed sample are documented here for the audiometric tests--air-conduction, bone-conduction and speech reception. Air-conduction testing levels were obtained using pure-tone audiometers among the national probability sample examined in 1971-1975. Bone-conduction hearing thresholds were determined for a subset of this sample limited to those detail subjects examined from the beginning of the survey in 1971 through June 1974. The speech component was administered during July 1974 through October 1975. By design, the full sample as well as the two subsamples are representative of the noninstitutionalized U.S. population aged 25-74 years at the respective midsurvey points.

Data Collection: Information for all examined sample persons in HANES I was obtained by means of a household interview, a general medical history, a 24-hour dietary intake recall interview, a food frequency interview, a food program questionnaire, a general medical examination, dental, dermatological and ophthalmological examinations, anthropometric measurement, hand-wrist x-rays (of those ages 1-17 only) and 24 hematological, blood chemistry, and urological laboratory determinations.

In addition to the information received on all examined persons by means of the above questionnaires, procedures and measurements, the following data were gathered on the subsample of adults aged 25-74: a medical history supplement; supplementary questionnaires concerning arthritis, respiratory and cardiovascular conditions (when applicable); a health care needs questionnaire; a general well-being questionnaire; an extended medical examination; x-rays of the chest and hip and knee joints; audiometry; electrocardiography; goniometry; spirometry; pulmonary diffusion and tuberculin tests; along with additional laboratory determinations.

Use of HANES Data

With the goal of mutual benefit, NCHS requests the cooperation of recipients of data tapes in certain actions related to their use:

- A. Any published material derived from the data should acknowledge the National Center for Health Statistics as the original source. It should include also a disclaimer which credits any analyses, interpretations, or conclusions reached to the author (recipient of the tape) and not to NCHS, which is responsible only for the initial data.
- B. Consumers who wish to publish a technical description of the data will make a reasonable effort to insure that the description is not inconsistent with that published by NCHS. This does not mean, however, that NCHS will review such descriptions.

Errors in the Data Sets and Survey Differences

The data users tapes have been subjected to a great deal of careful editing. However, due to the large volume of data in the series, it is likely that a small number of errors or discrepancies remain undetected. We would appreciate if any such errors are detected that they be brought to our attention so that new corrected copies of the tape can be created and errata sheets issued to previous purchasers.

Some of the continuous data items have extremely high or low values and we have verified that they do in fact appear that way on the hard documents, that is, we have verified that the values have not been incorrectly keyed.

In general, we have not attempted to resolve any differences that may exist between estimates derived from the various subsamples of HANES I. Nor have we made any comparisons between estimates from HANES I and previous surveys conducted by the Division of Health Examination Statistics.

Variance Estimation

Because the Health and Nutrition Examination Survey is based upon a complex sample design, the assumptions of many statistical tests and routinely available statistical programs are not met. For this reason, when estimates of the variances of statistics from HANES are computed, the technique of estimation must be based upon complex sampling theory. In order to provide the user with the capability of estimating the complex sample variances, we have provided Strata and Primary Sampling Unit (PSU) codes on the HANES user tapes in tape positions 194-198. However, these codes are suitable for making variance estimates only for examination locations 1-65 and 1-100. To compute variance estimates for examination locations 1-35 or 66-100, it is necessary to recode the current Strata-PSU codes according to the specifications that follow. The resultant recoded Strata-PSU codes should be used only for locations 1-35 and 66-100.

One computer program that should be widely available sometime around the summer of 1978 as part of the Statistical Analysis System (available from the SAS Institute, Inc., P.O. Box 10066, Raleigh, North Carolina 27605) is capable of using the Strata-PSU codes provided for HANES to compute complex sample variances. Other programs may also be available.

In those Strata, referred to as certainty or self-representing Strata, the PSU codes are actually the segment numbers. Neither the Strata codes nor the PSU codes are the original codes used in the formation of the HANES sample design, but are none-the-less a unique recoding of the original codes. For further discussion of the sample design of HANES, the user should consult the publications of the National Center for Health Statistics-- Series 1, Nos. 10a and 14 and the detailed note for tape positions 158-193.

Recode Specifications for Strata-PSU Codes

First.--Create a file with only those records in the file for examination locations 1-35.*

Second.--Retain the original Strata-PSU codes in Strata 7-10 and 13 in the original form as the recoded Strata-PSU codes.

Third.--Recode the remaining strata according to the chart below.

Fourth.--Repeat the process for examination locations 66-100.*

TAPE CHARACTERISTICS

Title: Audiometric Test (Air, Bone, Speech Reception) Data Tape

Catalog Number: 4241

Data Set Name: HEHANESI.DU424101

Record Length: 1600

Blocksize: 1600

Number of Records: 6913

Number of Reels: 1

Recording Mode: Fixed Block, EBCDIC

Channel: 9 Track

Created by: Division of Health Examination Statistics
National Center for Health Statistics
Hyattsville, Maryland

General Notes

Asterisks on the Tape Description: Some of the data items were obtained only for a particular subsample of HANES. Consequently some of these items appear to have a great deal of missing data (coded as BLANK) due to nonresponse, but in fact the data are missing because the design of HANES dictated that the item was to be obtained only for a particular subsample. (For further discussion of the various subsamples in HANES the user should see the detailed note for tape positions 158-193.)

To alert the user to this fact, asterisks were put on the tape description. One asterisk denotes that the data item was obtained only on examinees in Locations 1-65. Two asterisks denote that the data item was obtained only on examinees in Locations 66-100.

Demographic Information: An advance letter, announcing the forthcoming arrival of an interviewer from the U.S. Bureau of the Census, was mailed to each household that fell into the sample area. The interviewer subsequently visited the household to ascertain its composition and to administer a questionnaire, the primary purpose of which was to obtain demographic information. The questionnaire was administered to each potential sample person that was available and competent enough to respond to questions. In the event that a potential sample person was not at home at the time of interview, any responsible adult in the household was asked to respond to the questions for the absent person.

Demographic information for each of the examinees appears in tape positions 1-200.

AUDIOMETRIC TESTS

Air Conduction and Bone Conduction

Each adult was tested at the following four frequencies: 500, 1000, 2000, and 4000 Hertz, with the 1000 Hz frequency repeated a second time as a measure of the reliability of test results. Air conduction tests for each ear were completed first, then the bone conduction tests in the order indicated on the recording form. Alternation of presentation to each ear was varied among examinees to safeguard against errors in testing.

The threshold recorded for each frequency was the lowest decible (dB) level at which 50 percent or more of the responses were obtained, that is, in two out of three or three out of five trials. Masking for the nontest ear was done in air conduction testing only on retest when there was a 40 dB difference or more in the thresholds for the two ears. In bone conduction testing, masking was done routinely in the nontest ear at 30, 40, and 50 dB above threshold for that ear. Standardized testing procedures were used to insure as consistent test results as possible throughout the survey. Any condition such as earache, cold, or other problem that might affect the test results was also recorded.

Speech Reception

Each subject was asked to repeat lists of 10 sentences, each list containing 50 key words, beginning at 10-15 dB below the air conduction threshold obtained from the first test at 1000 Hz. When the air conduction threshold

was 35 dB or better, the first list was presented at 20 dB. If the examinee missed six or more key words, the next list was presented at a level 10 dB higher. Testing was continued in this way until the subject missed five key words or fewer or until the ear had been tested at 80 dB. Each ear was tested in this way beginning with the list immediately following the last list used for the previous examinee.

DEMOGRAPHIC DATA SUMMARY - NHANES I

Tape Positions

Sample sequence number.....	1
Size of Place.....	10
SMSA-not SMSA.....	11
Type of living quarters.....	12
Land usage.....	13
If rural, asked - How many acres of land are included?.....	14
If 10 acres or more asked - Sale of crops, etc. amount to \$50 or more?..	15
If less than 10 acres asked - Sale of crops, etc. amount to \$250 or more?.....	16
Age - Head of household.....	17
Sex - Head of household.....	19
Highest grade attended - head of household	20
Race - head of household.....	22
Total number of persons in household.....	23
Total sample persons in household.....	25
Number of rooms in house.....	27
Is there piped water?.....	28
If yes, is there hot and cold piped water?.....	29
If yes to piped water - Does house have a sink with piped water?.....	30
Does house have a range or cook stove?.....	31
Does house have a refrigerator?.....	32
Are kitchen facilities used by anyone not living in household?.....	33
Total family income group.....	34

Note: The following income questions were asked only if "Total Family Income" was less than \$7,000.

During the Past Year Did You or Any Members of Your Family Receive Money From:

Wages or salaries.....	36
If yes - How much altogether before deductions?.....	37
Social Security or Railroad Retirement.....	41
If yes - How much altogether?.....	42
Welfare payments or other public assistance.....	46
If yes - How much altogether?.....	47
Unemployment or Workman's Compensation.....	51
If yes - How much altogether?.....	52
Government employee pensions or private pensions.....	56
If yes - How much altogether?.....	57

	<u>Tape Positions</u>
Dividends, interest or rent.....	61
If yes - How much altogether?.....	62
Net income from own non-farm business, professional practice or partnership.....	66
If yes - How much altogether?.....	67
Net income from a farm.....	71
 If yes - How much altogether?.....	 72
Veteran's payments.....	76
If yes - How much altogether?.....	77
Alimony, child support or contributions from persons not living in household.....	81
If yes - How much altogether?.....	82
 Any other income.....	 86
If yes - How much altogether?.....	87
Total amount.....	91
Family unit code.....	95
Relationship to head of household.....	100
 Age at interview.....	 101
Race of examined person.....	103
Sex of examined person.....	104
Marital status.....	105
Date of birth (month and year).....	106
 Place of birth.....	 110
Highest grade of regular school ever attended.....	112
Did he finish the grade?.....	114
Is he attending school now?.....	115
Has he ever attended a school of any kind?.....	116
 If yes - What kind of school?.....	 117
Is any language other than English frequently spoken in the household?..	118
If yes - What language?.....	119
What is your main ancestry or national origin?.....	120
What was he doing most of past three months?.....	122
 If "something else" - What was he doing?.....	 123
If "keeping house" or "something else" - Did he work at a job or business at any time during the past three months?.....	124
If "working" - Did he work full-time or part-time?.....	125
Did he work at any time last week or the week before (not around house)?	126
If no - Even though he did not work during that time, does he have a job or business?.....	127

	<u>Tape Position</u>
Was he looking for work or on lay-off from a job?.....	128
If yes - Which?.....	129
Class of worker.....	130
If self-employed in "own" business and not a farm, is the business incorporated?.....	131
Business or industry code.....	132
Occupation code.....	135
Date of examination.....	138
Age at examination.....	144
Farm/Non-Farm.....	146
Poverty index.....	147
Region.....	150
FOOD PROGRAMS APPLICABILITY.....	151
Are you certified to participate in the food stamp program?.....	152
Are you buying food stamps now?.....	153
What is the main reason you aren't participating in the program?.....	154
Are you certified to participate in the commodity distribution program?	155
Are you receiving commodity foods now for your family?.....	156
Why aren't you participating in the program?.....	157
SAMPLE WEIGHTS.....	158
Strata.....	194
Primary Sampling Units (PSU).....	196

DETAILED NOTES

TAPE POSITION 10

Size of Place

Size of place classification was derived from the 1960 census. According to the definition used in the 1960 census, the urban population was comprised of all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages and towns (except towns in New York, New England, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (c) towns in New England and townships in New Jersey and Pennsylvania which contained no incorporated municipalities as subdivisions and had either 2,500 inhabitants or more, or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in states other than the New England states, New Jersey, and Pennsylvania, that had no incorporated municipalities within their boundaries and had a density of 1,500 persons per square mile; and (e) unincorporated places of 2,500 inhabitants or more not included in any urban fringe. The remaining population was classified as rural.

Urban areas are further classified by population size for places within urbanized areas and other places outside urbanized areas.

DETAILED NOTES

TAPE POSITION 11

SMSA

A standard metropolitan statistical area is basically a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to the 1960 Census, they are socially and economically integrated with the central city. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities.

DETAILED NOTES

TAPE POSITIONS 22 AND 103

Race

The race of the respondent was marked by observation and it was assumed the race of all related persons was the same as the respondent unless otherwise learned. The race categories were "White", "Negro" or "other." If the appropriate category could not be marked by observation, then race was asked. Persons of races other than White or Negro, such as Japanese, Chinese, American Indian, Korean, Hindu, Eskimo, etc. were reported as "Other." Mexicans were included with "White" unless definitely known to be American Indian or of other nonwhite race.

DETAILED NOTES
TAPE POSITIONS 34-35

Total Family Income Group

The income group represents the total combined family income for the past twelve (12) months. It includes income from all sources such as wages, salaries, social security or retirement benefits, help from relatives, rent from property and so forth. The income groups were not reconciled to the component parts (tape positions 36-94). The income component parts were not asked when the gross income was greater than \$6,999 per annum. However, amounts greater than \$6,999 appear in tape positions 37-40, 67-70, and 72-75. Some respondents reported a loss of income from their nonfarm business, professional practice, partnership or farm and this explains why some data fields are greater than \$6,999, but the individual total in tape positions 91-94 does not exceed this figure.

DETAILED NOTES

TAPE POSITIONS 95-99

Family Unit Code

All related sample persons in the same family unit have the same computer generated family unit code. This will enable detailed analysis of the individual family unit.

DETAILED NOTES

TAPE POSITIONS 132-134 AND 135-137

Industry and Occupation Codes

A person's occupation may be defined as his principal job or business. For this survey purpose, the principal job or business of a respondent is defined in one of the following ways: If the person worked during the two week interview period or had a job or business, the question concerning his occupation (or work) applies to his job during that period. If the respondent held more than one job, the question is directed to the one at which he spent the most time. It refers to the one he considers most important when equal time is spent at each job. A person who has not begun work at a new job, is looking for work, or is on layoff from work is questioned about his last full-time civilian job. A full-time job is defined as one at which the person spent 35 or more hours per week and which lasted two consecutive weeks or more. A person who has a job to which he has not yet reported and has never had a previous job or business is classified as a "new worker."

The 1970 census of population Alphabetical Index of Industries and Occupations was used in the coding of both the industry and occupation.

Library of Congress Number 74-612012. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. \$3.00. Stock Number 0301-2283.

DETAILED NOTES

TAPE POSITION 146

Land used for farming purposes (Code 1 in Tape Position 146) was identified as being rural land (Code 2 in Tape Position 13) consisting of 10 or more acres (Code 1 in Tape Position 14) with crop sales amounting to \$50 or more (Code 2 in Tape Position 15), or rural land (Code 2 in Tape Position 13) consisting of less than 10 acres (Code 2 in Tape Position 14) with crop sales amounting to \$250 or more (Code 3 in Tape Position 16). All Other land is classified as nonfarm (Code 2 in Tape Position 146).

DETAILED NOTES

TAPE POSITIONS 147-149

Poverty Index--Income status was determined by the Poverty Income Ratio (PIR). Poverty statistics published in the Census Bureau reports^{1/} were based on the poverty index developed by the Social Security Administration in 1964. (For a detailed discussion of the SSA poverty standards, see reference 2.) Modifications in the definition of poverty were adopted in 1969.^{3/} The standard data series in poverty for statistical use by all executive departments and establishments has been established.^{4/}

The two components of the PIR are the total income of the household (numerator) and a multiple of the total income necessary to maintain a family with given characteristics on a nutritionally adequate food plan^{3/} (denominator). The dollar value of the denominator of the PIR is constructed from a food plan (economy plan) necessary to maintain minimum recommended daily nutritional requirements. The economy plan is designated by the Department of Agriculture for "emergency or temporary use when funds are low."

For families of three or more persons, the poverty level was set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was adjusted by the relatively higher fixed expenses of these smaller households.

The denominator or poverty income cutoff adjusts the family poverty income maintenance requirements by the family size, the sex of the family head, the age of the family head in families with one or two members, and the place of residence (farm, nonfarm). Annual revisions of the poverty income cutoffs are based on the changes in the average cost of living as reflected in the Consumer Price Index.

As shown in the table, the annual income considered to be the poverty level increases as the family size increases. A family with any combination of characteristics and with the same income as shown in the table has been designated as having a PIR or poverty level of 1.0. The same family with twice the income found in the table would have a PIR of 2.0. Ratios of less than 1.0 can be described as "below poverty," ratios greater than or equal to 1.0, as "at or above poverty."

Poverty thresholds are computed on a national basis only. No attempt has been made to adjust these thresholds for regional, State, or other local variation in the cost of living (except for the farm, nonfarm difference). None of the noncash public welfare benefits such as food stamp bonuses or free food commodities are included in the income of the low income families receiving these benefits.

DETAILED NOTES

TAPE POSITION 150

Region

The United States was divided into four broad geographic regions of approximately equal population. Those regions, which deviate somewhat from the groups used by the Bureau of the Census, are as follows:

<u>Region</u>	<u>States Included</u>
Northeast	Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania
South	Delaware, Maryland, District of Columbia, West Virginia, Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Arkansas
Midwest	Ohio, Illinois, Indiana, Michigan, Wisconsin, Minnesota, Iowa, Missouri
West	Washington, Oregon, California, Nevada, New Mexico, Arizona, Texas, Oklahoma, Kansas, Nebraska, North Dakota, South Dakota, Idaho, Utah, Colorado, Montana, and Wyoming.
