FILE CHARACTERISTICS

TITLE: User Data Set #8 - Vision

CONTENT: Vision Data by File Sequence Number

CASE COUNT: 6672

RECORD COUNT: 6672

RECORDING MODE: Fixed Block, EBCDIC

RECORD LENGTH: 75

RECS/BLOCK: 20 Records

DENSITY: 1600 or 800 bpi

CHANNEL: 9-trk

LOCATION: North Carolina DP Facility

CREATED BY: DHES/NCHS/OASH

DATA SET NAME: HE01DRMW.MRVISION

Introduction

The overall plan of the Health Examination Survey (HES) was to conduct successive, separate cycles of examinations in specific segments of the national population. The data in this report refers to the survey for cycle 1.

The first cycle of the HES was the examination of a sample of adults. It was directed toward the collection of statistics on the medically defined prevalence of certain chronic diseases and of a particular set of dental findings and physical and physiological measurements. The probability sample consisted of 7,710 of all noninstitutional civilian adults in the age range 18-79 years in the United States. Altogether 6,672 persons were examined during the period from October 1959 to December 1962.

The tape contains data from the cycle 1 survey containing vision related data items. There are 6,672 records of 75 characters each. The first 55 characters are coded numeric and represent 35 separate data items. The remaining 20 characters are filled with blanks.

Monocular and binocular visual acuity findings related to selected demographic characteristics are presented in the following publications of the National Center for Health Statistics:

Binocular visual acuity of adults, United States, 1960-1962.

Vital and Health Statistics. PHS Pub. No. 1000-Series 11-No. 3.

Public Health Service. Washington. U.S. Government Printing Office, June 1964.

Binocular visual acuity of adults by region and selected demographic characteristics, United States, 1960-1962. Vital and Health Statistics. PHS Pub. No. 1000-Series 11-No. 25.

Public Health Service. Washington. U.S. Government Printing Office, June 1967.

Monocular-binocular visual acuity of adults, United States, 1960-1962. Vital and Health Statistics. PHS Pub. No. 1000-Series 11-No. 30. Public Health Service. Washington. U.S. Government Printing Office, April 1968.

Medical history and examination findings related to visual acuity are presented in the following publication of the National Center for Health Statistics:

History and examination findings related to visual acuity among adults, United States, 1960-1962. Vital and Health Statistics. PHS Pub. No. 1000-Series 11-No. 28. Public Health Service. Washington. U.S. Government Printing Office, Mar. 1968.

Detail Note #1

File Sequence Number

This five digit code represents two identifying numbers. The first is the number eight, which is given to every record. This number identifies the tape as being a vision tape. The last four digits sequentially number all of the records (from 0001 to 6672) on the tape.

Detail Note #2

Final Estimate Weight

This data item is the final weighting factor that will adjust the sampled person to the PSU selection technique and to the post-stratification by age and sex for the final national estimates. In addition this number was adjusted so that the biasing effect of non-response would be minimized.
